

# The Wash at Galloway has Gone Green!

We are now 100% Solar Powered!

Enough sunlight hits the earth every hour to power all of the world's energy needs for a year. Solar energy systems silently and efficiently convert sunlight into electricity with no moving parts and minimal maintenance. In addition, solar systems operate pollution-free.

According to the EPA, buildings and homes alone are responsible for producing 35% of all carbon emissions in The United States. For an example of the benefits of solar power, a typical residential solar installation can eliminate enough carbon in our atmosphere to compensate for planting 100 trees *per year*.

With the increase in our knowledge of environmental issues, the Wash at Galloway has recognized the impact that business can have on the environment. We understand that consumers and communities look to do business with companies that are committed to operating with a green philosophy, and the move to solar power is our commitment to that ideal.
